

SPECTROTEST mobile metal analyzer

Upgrade to SPECTROTEST for Even Faster Readiness on the Spot

- New powerful integrated PC
- Reduced start-up time by a factor of 2.5
- Multi-language Windows 10 IoT Enterprise 64-bit
- Available also as an upgrade kit

The SPECTROTEST mobile spectrometer delivers precise results without compromise when an exact metal analysis is required, materials are difficult to identify, or there is a large number of samples to be tested.

There's no need to compromise when using the SPECTROTEST. The new integrated PC reduces the start-up time of the device significantly by a factor of 2.5.

Example: If you have moved the SPECTROTEST to a different testing location and were not operating in battery mode, the software, with its measurement screen, is up and ready again in less than a minute!

Thus, the entire operation of the SPECTROTEST has become more efficient by the faster readiness on the spot.

The change to the Windows 10 IoT Enterprise edition in 64-bit architecture on SPECTROTEST not only features multi-language capabilities, but also ensures long-term support.

Keep your existing SPECTROTEST (TXC03 & TXC35) up-to-date

The upgrade is available for the SPECTROTEST models TXC03 & TXC35. Please contact your local SPECTRO subsidiary or regional SPECTRO representative for more information.
