The SPECTROGREEN delivers best-of-class ICP-OES performance. Customers value its outstanding reliability and analytical performance. However, preserving these qualities throughout its entire operating life isn’t possible without proper maintenance.

That the breakdown risk for an analytical instrument increases with time is known, but only you can say what a breakdown will cost you. It could have wide-reaching consequences: On top of the costs to repair the instrument, the instrument being unavailable may mean that you have increased material costs, lower, or no, sample throughput, missed deadlines and, ultimately, you may face decreased revenues and profitability.

Take advantage of the possibility to maintain SPECTROGREEN® out of the box performance, while reducing the risk of costly breakdowns, with regular performance maintenance inspections within the framework of SPECTRO’s AMECARE Performance Services. Based on your needs and circumstances, an individual maintenance plan is created, reflecting your quality compliance requirements and risk management strategies.

The rest is automatic. Appointments for scheduled inspections are made and the work conducted; all required maintenance and preventative measures will be carried out by authorized, factory trained and certified, service engineers that are backed by a best-of-class worldwide factory support infrastructure. The correct working order of the instrument is documented with a certificate and a test seal affixed to the instrument. The lifetime of the instrument is extended and your quality compliance documented.

SPECTRO’s Performance Maintenance is a guarantee for the long-term preservation of the value and performance of your SPECTROGREEN.
SPECTROGREEN Performance Maintenance

Ensuring peak performance and maximum return on investment over the life of your equipment.

We will deliver this by
- Proactively maintaining your equipment to maximize availability
- Optimizing solutions to meet your unique applications.
- Enhancing user skills by providing access to product and application experts.

A SPECTROGREEN Performance Maintenance inspection includes, but is not limited to, the following:

Initial Instrument Status Evaluation
A general examination of the instrument’s components and functions.

General Maintenance
Cleaning of the primary optical components, data backup of the instrument software and measurement results, installation of any instrument software updates if required.

Measurements
Main voltage, argon gas flows and voltage supply, optic temperature and pressure, analytical performance.

Replacement of parts and components
Replacement of filters & seals. Primary optical components and UV-Plus purifier replaced as required.

Determination of the time for the next inspection

Available for
SPECTROGREEN FMX46
