Take advantage of the possibility to maintain SPECTRO ARCOS’ out of the box performance, while reducing the risk of costly breakdowns, with regular performance maintenance inspections within the framework of SPECTRO’s AMECARE Performance Services. Based on your needs and circumstances, an individual maintenance plan is created, reflecting your quality compliance requirements and risk management strategies.

The rest is automatic. Appointments for scheduled inspections are made and the work conducted; all required maintenance and preventative measures will be carried out by authorized, factory trained and certified, service engineers that are backed by a best-of-class worldwide factory support infrastructure. The correct working order of the instrument is documented with a certificate and a test seal affixed to the instrument. The lifetime of the instrument is extended and your quality compliance documented.

SPECTRO’s Performance Maintenance is a guarantee for the long-term preservation of the value and performance of your SPECTRO ARCOS.

Experience shows that, without proper maintenance, the likelihood of a breakdown increases exponentially with the age of an instrument. Regular maintenance drastically decreases this risk and extends the life of the instrument.

On top of the costs to repair the instrument, the instrument being unavailable may mean that you have increased material costs, lower, or no, sample throughput, missed deadlines and, ultimately, you may face decreased revenues and profitability.

The SPECTRO ARCOS delivers best-of-class ICP-OES performance. Customers value its outstanding reliability and analytical performance. However, preserving these qualities throughout its entire operating life isn’t possible without proper maintenance. That the breakdown risk for an analytical instrument increases with time is known, but only you can say what a breakdown will cost you. It could have wide-reaching consequences:
A SPECTRO ARCOS Performance Maintenance inspection includes, but is not limited to, the following:

**Initial Instrument Status Evaluation**
A general examination of the instrument’s components and functions.

**General Maintenance**
Cleaning of the OPI/SPI and primary optical components, data backup of the instrument software and measurement results, installation of any instrument software updates if required

**Measurements**
Main voltage, argon gas flows and voltage supply, optic temperature and pressure, analytical performance

**Replacement of parts and components**
Replacement of filters & seals. Primary optical components and UV-Plus purifier replaced as required.

**Determination of the time for the next inspection**
Available for
SPECTRO ARCOS FHE12a / FHS12a
SPECTRO ARCOS 165 FHE16a / FHS16a
SPECTRO ARCOS FHX2X

You also profit from the following additional services:

- Priority support and response times
- Discounts on replacement parts and service for the time between agreed upon inspections
- System backup and all necessary software updates
